

AI-Based Document Search and Knowledge Retrieval with Conversational Interface

App Name: Knowledge Seeker Chatbot

Presented by Aarya R. Thakar

Infosys Springboard Virtual Internship 6.0 | February 2026

Navigating the Information Deluge

In today's fast-paced digital landscape, information overload is a pervasive challenge. Users struggle to extract precise answers from vast document repositories, often encountering:

- Information Overload: Drowning in data, finding specific details is time-consuming.
- AI Hallucinations: Traditional AI models can generate inaccurate or misleading information.
- Inefficient Search: Current document search tools lack conversational capabilities.

Overcoming Information Overload

Traditional methods often falter when extracting precise insights from vast document repositories. Manual review is slow and prone to errors, while keyword-based searches frequently miss context and relevant information.

This leads to:

- Inefficient research workflows
- Delayed decision-making
- Missed critical insights

Introducing the Knowledge Seeker Chatbot

Our solution is a RAG-based conversational AI designed to provide accurate, document-centric Q&A. By leveraging Retrieval-Augmented Generation (RAG), the chatbot ensures every answer is grounded in your uploaded content. This AI-powered assistant combines the best of large language models (LLMs) with robust information retrieval. It intelligently understands your queries, fetches relevant document snippets, and synthesizes accurate, context-aware responses.

Zero Hallucinations

Answers are strictly sourced from uploaded documents, eliminating AI-generated inaccuracies.

Versatile Document Support

Seamlessly processes PDFs, DOCX, TXT, and Markdown files for comprehensive knowledge retrieval.

Conversational Interface

Engage with your documents naturally, asking follow-up questions for deeper insights. and it has memory and context understanding.

MILESTONES

Project Development Timeline

Our project was systematically developed over four critical milestones, ensuring robust functionality and timely delivery.

Technical Foundation

The Knowledge Seeker Chatbot leverages a modern and efficient technology stack. Streamlit provides an intuitive user interface, interacting with a powerful RAG engine (LlamaIndex) that orchestrates queries to a Qdrant vector database for document embeddings and Google Gemini as the large language model for generating responses. Also for Local Development we use Docker for isolate and secure environment.

USE CASES

Empowering Diverse Users

The Knowledge Seeker Chatbot offers significant value across various domains, enhancing productivity and learning for a wide audience.

Students

Rapidly find answers in textbooks and prepare for exams with concise, accurate information, Quick summarization of upload documents and Creativity control.

Researchers

Streamline literature reviews by quickly extracting relevant data from research papers, Quick summarization of upload documents and Creativity control.

Professionals

Efficiently search technical documentation, reports, and manuals for critical insights, and also, Quick summarization of upload documents.

Autodidacts and Polymaths

It's helpful for them who are learning different domains by them self and for them self, independently, and help them to synthesis a cross variety of subject, quick summarization, Q&A, etc.

FEATURES

Unique Capabilities

Our chatbot stands out with features engineered for precision, continuity, and real-world application.

Key Strengths

Zero Hallucinations: Guarantees answers are purely document-sourced.

Conversation Memory: Facilitates natural follow-up questions, maintaining context.

Production-Ready: Includes auto model switching and file deduplication.

Modern Tech Stack: Built with LlamaIndex, Qdrant, Google Gemini, and Streamlit.

One Click Summarization: Summarize all uploaded documents in single click.

LLM Matrix Control: User can Play and experiments with creativity, length, and search methods so the they can choose and select things as per needs and requirements.

Hybrid Search: Combining semantic understanding with keyword precision for unparalleled retrieval.

Real-time Document Q&A: Instantaneous answers from newly uploaded documents.

Optimized Cloud Deployment: Cost-effective solution leveraging free-tier cloud resources.

Current Limitations

Document-Bound: Cannot answer queries outside of uploaded content.

API Rate Limits: Requests Per Minute (RPM) limit in Free tier.

No User Auth: Lacks user authentication features for multi-user environments.

Context Splitting Issues: Minor inaccuracies in few queries due to context fragmentation.

No Separate Clusters for Individual Users: Due to Free tier limitations, all users documents are stored in one cluster.

Response Time: Strictly depends on query, and prompt.

- Streamlit Sleep: Uptime Issue due to Free Tier Limitations, of no traffic then application is put in sleep, user need to awake them if it's in sleeping.

PERFORMANCE & ACHIEVEMENTS

Driving Impactful Results

Our rigorous development and deployment have yielded impressive performance metrics, ensuring a reliable and efficient user experience.

Factual Accuracy: Verified precision in retrieved answers.

10-12s Average Response Time: Fast, efficient knowledge delivery.

Cloud-Deployed & Scalable: Hosted on Streamlit Cloud and Qdrant Cloud for accessibility and growth.

Zero API Costs: Optimized for cost-efficiency using free-tier services.

70+ Commits: Reflects continuous development and refinement.

Query Success Rate: High reliability in processing user queries.

Vision for Evolution

We are committed to continuous innovation, with several key enhancements planned to elevate the chatbot's capabilities and user experience.

1

Enhanced Embeddings

Implement domain-specific fine-tuning and hybrid search for superior retrieval.

2

Improved UI/UX

Develop a document viewer with highlighting and optimize for mobile responsiveness.

3

Response Caching

Introduce a 3-level cache to achieve 25-30% faster response times.

4

Advanced Features

Integrate user authentication and multi-modal support for richer interactions. Chat and Memory isolation as modern LLMs such as Claude, ChatGPT, Gemini ,etc.

Conclusion & Contact

The Knowledge Seeker Chatbot successfully delivers a production-ready RAG solution, demonstrating high accuracy and efficient document-based Q&A. We invite you to explore its capabilities and join us in shaping the future of conversational AI.

Thank You
